REVISION HISTORY

MODEL NO: LM315TU5A

1. GENERAL DESCRIPTION

1.1 OVERVIEW

This module is color active matrix LCD module incorporating amorphous silicon TFT(Thin Film Transistor) LCD panel. It is composed of a color TFT-LCD panel, driver ICs, LED Backlight... etc. Graphics and texts can be displayed on a 1366×RGB×768 dots panel with about 16,777,216 colors(R/G/B 8bit in each color) by using LVDS(Low Voltage Differential Signaling) to interface, +12V of DC supply voltage.

In order to improve the response time of LCD, this module applies the Over Shoot driving (O/S driving) technology for the control circuit. In the O/S driving technology, signals are being applied to the Liquid Crystal according to a pre-fixed process as an image signal of the present frame when a difference is found between image signal of the previous frame and that of the current frame after comparing them.

By using the captioned process, the image signals of this LCD module are being set so that image response can be completed within one frame, as a result, image blur can be improved and clear image performance can be realized.

2. ABSOLUTE MAXIMUM RATINGS

2.1 ABSOLUTE RATINGS OF ENVIRONMENT

Item	Symbol	Value		Unit	Remark
		Min.	Max.		
Storage Temperature	T _{ST}	-20	+60	°C	[Note 1,3]
Operating Ambient Temperature	T _{OP}	0	50	°C	[Note 1,2,3]

Storage Condition: With shipping package.

Shelf life: one year

[Note 1] Temperature and relative humidity range is shown in the figure below.

- (a) 80 %RH Max. (Ta \leq 40 °C).
- (b) Wet-bulb temperature should be 39 °C Max. (Ta > 40 °C).
- (c) No condensation.

[Note 2] The maximum operating temperature is based on the test condition that the surface temperature of display area is less than or equal to 50 °C with LCD module alone in a temperature controlled chamber. Thermal management should be considered in your product design to prevent the surface temperature of display area from being over 60 °C. The range of operating temperature may degrade in case of improper thermal management in your product design.

[Note 3] The rating of environment is base on LCD module. Except LCD module, the customer has to consider the ability of other parts of LCD set and LCD set assembly process.

Dip conditions for supply voltage

a) $9.1V \leq V_{CC} < 10.8V$ $td \leq 10ms$ b) $V_{CC} < 9.1V$

Dip conditions for supply voltage is based on input voltage sequence.

※ Data1: CLKIN±, RIN0±, RIN1±, RIN2±, RIN3±

※ Data2: SELLVDS

※ About the relation between data input and back light lighting, please base on the above-mentioned input sequence.

※ When back light is switched on before panel operation or after a panel operation stop, it may not display normally. But this phenomenon is not based on change of an incoming signal, and does not give damage to a liquid crystal display.

[Note 2] Typical current situation: 256 gray-bar pattern ($V_{CC} = +12.0V$).

The explanation of RGB gray scale is seen in section 8.

*The measurement shall be executed 30 minutes after lighting at rating.

*The optical characteristics are measured using the following equipment.

Measurement of viewing angle range, Response time.

Measurement of Contrast, Luminance, Chromaticity.

[Note 1] Definitions of viewing angle range:

[Note 2] Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio} = \frac{\text{Luminance (Brightness) with white screen}}{\text{Luminance (Brightness) with black screen}}$$

[Note 3] Definition of response time

The response time (τ_{DRV}) is defined as the following figure and shall be measured by switching the input signal for "any level of gray (0%, 25%, 50%, 75% and 100%) and "any level of gray (0%, 25%, 50%, 75% and 100%).

$$\tau_{DRV} = \sum (\tau^*: x-y) / 20$$

[Note 4] This shall be measured at center of the screen.

[Note 5] Definition of Luminance and Luminance uniformity:

Luminance: To measure at the center position "5" on the screen (NO.5).

Luminance uniformity: $L_w(\text{MAX})$ and $L_w(\text{MIN})$ are the maximum and minimum luminance value measure at the position "1~5" on the screen (NO.1~5) and the equation:

$$\Delta L_w = L_w(\text{MIN}) / L_w(\text{MAX}) \times 100\%$$

8.2 PACKING METHOD

9. CARTON STORAGE CONDITION

Temperature: 0°C to 40°C

Humidity: 80%RH or less

Reference condition: 20°C to 35°C, 80%RH or less (summer)

5°C to 15°C, 80%RH or less (winter)

The total storage time (40°C, 80%RH): 240h or less

Sunlight Be sure to shelter a product from the direct sunlight.

Atmosphere Harmful gas, such as acid and alkali which bites electronic components and/or wires must not be detected.

Be sure to put cartons on palette or base, don't put it on floor, and store them with removing from wall. Please take care of ventilation in storehouse and around cartons, and control changing temperature is within limits of natural environment.

10. PRECAUTIONS

10.1 ASSEMBLY AND HANDLING PRECAUTIONS

- (a) Do not apply rough force such as bending or twisting to the module during assembly.
- (b) It is recommended to assemble or to install a module into the user's system in clean working areas. The dust and oil may cause electrical short or worsen the polarizer.
- (c) Since the LCM consists of TFT and electronic circuits with CMOS-ICs, which are very weak to electrostatic discharge, person who is handling an LCM should be grounded through adequate methods such as an anti-static wrist band. Connector pins should not be touched directly with bare hands.

Reference: Process control standard is shown as follow,

item	Management standard value and performance standard
1 Anti-static mat(shelf)	1to50 [Mega ohm]
2 Anti-static mat(floor, desk)	1to100 [Mega ohm]
3 Ionizer	Attenuate from ±1000V to ±100V within two seconds.
4 Anti-static wrist band	0.8 to 10 [Mega ohm]
5 Anti-static wrist band entry and ground resistance	Below 1000 [ohm]
6 Temperature	22 to 26 [°C]
7 Humidity	60 to 70 [%]

- (d) Do not apply pressure or impulse to the module to prevent the damage of LCD panel and backlight.
- (e) Always follow the correct power-on sequence when the LCD module is turned on. This can prevent the damage and latch-up of the CMOS LSI chips.
- (f) Be sure to turn off the power supply when inserting or disconnecting the cable.
- (g) Do not disassemble the module.

- (h) Front polarizer can easily be damaged, so please pay attention on it.
- (i) Using a absorbent cotton or other soft cloth without chemicals for cleaning, because the surface of polarizer is very soft and easily scratched.
- (j) Since long contact with drops of water may cause discoloration or spots, please wipe off them as soon as possible.
- (k) The Panel will be broken or chipped when it is dropped or bumped against a hard substance.
- (l) Applying too much force and stress to PWBS and drivers may cause a malfunction electrically and mechanically.
- (m) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- (n) Moisture can easily penetrate into LCD module and may cause the damage during operation.
- (o) High temperature or humidity may deteriorate the performance of LCD module. Please store LCD modules in the specified storage conditions.
- (p) This LCM is corresponded to ROHS.
- (q) When any question or issue occurs, it shall be solved by mutual discussion.

10.2 SAFETY PRECAUTIONS

- (a) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.
- (b) After the module's end of life, it is not harmful in case of normal operation and storage.

11. RELIABILITY

(a) Environment test condition

Test item	Condition
High temperature storage test	Ta= 60°C, 240h
Low temperature storage test	Ta= -20°C, 240h
High temperature and high humidity storage test	Ta= 50°C, 80%RH, 240h (No condensation)
High temperature operation test	Ta= 50°C, 240h
Low temperature operation test	Ta= 0°C, 240h

(b) Shock & Vibration

Test item	Condition
Shock (Non-Operation)	Shock level: 50 Grms Waveform: half sine wave, 11ms Direction: ±X,±Y,±Z One time each direction
Vibration (Non-Operation)	Wave form: Random Vibration level: 1.0 Grms Bandwidth: 10-300 Hz Duration: X,Y,Z, 30 min Each direction per 10 min

[Result evaluation criteria]

Under the display quality test condition with normal operation state, there shall be no change, which may affect practical display function.
